

Tien Nguyen

AI-NATIVE PRODUCT MANAGER · PRODUCT OWNER · EX-SOFTWARE ENGINEER

tiennguyentthao@gmail.com / +84 963 351 586 / linkedin.com/in/tiennguyenthao / tiennguyentt.github.io / Ho Chi Minh City

AI-native product manager and owner. I run an agent system (Claude and Codex) across my product work, from discovery to **graded, traceable specs** engineers build from, and I check model output against **ground truth** before it ships. Engineering-trained, so I read the diff and own the call. **7 years** across fintech, payments, Web3, insurance, and e-commerce, from 0-to-1 to enterprise rollout.

PCI EMERGENCY GATEWAY MIGRATION	137% · +30% BACKTEST ROI · BOOKINGS LIFT	5 AI SYSTEMS BUILT	7 yrs SPEC TO SHIP, REGULATED FINTECH
--	--	------------------------------	--

EXPERIENCE

Colonial Surety

2026 – Present

Product Management Engineer · B2B fintech, insurance, payments

Fiserv PCI passed. Ran an emergency Transax to CardPointe gateway migration across 3 production platforms after the primary gateway shut down. Scoped the impact, defined the cutover requirements, and verified each platform before go-live.

7 insurance products. Elicited and modeled requirements for a multi-product bundling flow: knockout logic, unified claims, dynamic naming, an edit-policy matrix (upgrade, cancel, endorsement), and partial-failure edge cases.

B2B SSO provider. Turned ambiguous CTO direction into a structured BRD defining Colonial as an SSO provider for partners: 2 user types, adaptive registration, cross-partner sessions, redirect-back.

Hookie JSC

2023 – 2025

Product Owner · Web3, fintech · client-services agency

Keeta (keeta.com, US payments network). Gathered and structured requirements for a high-throughput payments network on a DAG ledger backed by Google Cloud Spanner. Turned ambiguous client direction into use cases, data flows, and acceptance criteria for 400ms settlement, with KYC/AML onboarding controls.

Sire.bot forecasting and evaluation system (137% backtest ROI in ~2 months). Built a market-intelligence system that forecasts market signals: defined the model inputs, outputs, and evaluation rubric, then scored prediction accuracy against ground truth before release.

Requirements across clients. Ran discovery and elicitation with international clients in Web3 and fintech, turned vague or conflicting ideas into BRD/SRS, use-case models, and acceptance criteria, and checked each build against those criteria before handoff.

Olmo Technology

2022 – 2023

Product Owner · social e-commerce, web and app

20+ person team (12-person scrum core). Owned a full social-commerce app end to end: AWS livestream with live in-stream chat, a marketplace, a community feed, and bookings with vouchers. Shipped the livestream app in 6 months and the commerce platform in 4.

30% increase in bookings. Reworked the mobile booking flow and cut bank-transfer payment time within a week. Ran competitor research, personas, and backlog, and raised sprint throughput 20%.

Dialogflow chatbot. Designed the intents, entities, and dialog flows for a customer-support chatbot on Google Dialogflow (intent-based, pre-LLM).

4/10 Fire Protection Trading Service

2019 – 2022

Front-end Developer, then BA and Associate PM · ERP

Started in code. Built the ERP module front-ends for 6 months, then moved into BA and PM.

Owned the resource-management and quality-control ERP modules end to end: requirements, integration, and rollout.

AI-NATIVE BUILDING

selected AI products

Recon. An autonomous research and prediction pipeline: daily reports, project audits, and signal predictions run by Claude Code agents and delivered to a dashboard and Telegram. A built-in scoring engine grades signals and tracks prediction accuracy against ground truth. [↗ Try it live](#)

Sport Quant. A governed +EV prediction-market terminal: Elo and Dixon-Coles scoring, fractional Kelly sizing, and a deterministic risk gate that owns the bet decision while the model only explains the edge. The code decides, not the prompt. Streamlit. [↗ Try it live](#)

Knowledge engine. A multi-model agent system (Claude and Codex) that compiles transcripts into a source-traced knowledge base: conflicts resolve by source-provenance rules, and specs are checked for completeness and traceability before engineering, behind human approval gates. [↗ Try it live](#)

Petmood. AI Vision plus LLM triage: a photo and symptoms return a triage level and nearby vet options. Flutter, Supabase. Beta in HCMC.

AnDigi. An agent-operated insurance app where LLM agents run the workflow from quote to AI-assisted claims, benchmarked against leading insurtech claims workflows. In design.

SKILLS

product management & ownership

Discovery	problem and opportunity framing, hypothesis and assumption testing, decisions backed by data and analytics, competitor and domain research
Roadmap & delivery	prioritization and tradeoff calls, backlog ownership, roadmapping, Scrum delivery across engineering, QA, and design, executive and cross-functional alignment
Requirements	BRD / SRS / PRD, use-case and user-story modeling, acceptance criteria, edge-case and failure-path design, gap analysis
AI & model eval	model input/output specification, evaluation against ground truth, prediction-accuracy tracking, human-in-the-loop and approval gates, source provenance and traceability
AI-native ops	orchestrating an agent system that drafts, grades, and verifies specs; designing agent skills and subagents; human sign-off on every diff
Tools	Jira, Notion, Figma, GitHub, GA4, SQL, Claude, Codex, Cursor

EDUCATION

& credentials

Anthropic: Claude Code 101, AI Fluency, Agent Skills, Subagents	2026
Product School: Launches, Roadmap, Prioritization, Strategy, Discovery, AI Certificate	2025
CoderSchool: Full Stack Software Developer	2019
HCMC University of Education: BA, English	2014
