

Tien Nguyen

PRODUCT MANAGER / PRODUCT OWNER

tiennguyentthao@gmail.com | linkedin.com/in/tiennguyenthithao | github.com/tiennguyentt | Ho Chi Minh City

Product Manager and Owner with **5+ years** across B2B fintech, payments, insurance, e-commerce, and ERP, from 0-to-1 launches to enterprise product. **Ex-full-stack engineer** who reads the code and debugs alongside engineering, not around it. Built an **AI-native PM system** that compiles meeting transcripts into source-traced, graded specs, and builds products with AI agents.

EXPERIENCE

Colonial Surety Feb 2026 to present

Product Management Engineer · B2B fintech, insurance, payments

- + **Fiserv PCI passed.** Drove an emergency Transax to CardPointe gateway migration across 3 production platforms on a hard deadline after the primary gateway shut down.
- + **5 developers building in parallel.** Wrote a scenario payment-parameter matrix from ad-hoc CTO input so the team could build concurrently instead of serially.
- + **7 insurance products.** Designed the bundling flow (knockout logic, unified claims, dynamic naming), an edit-policy matrix (upgrade, cancel, endorsement), and partial-failure edge cases.
- + **B2B SSO provider.** Turned ambiguous CTO direction into a structured BRD defining Colonial as an SSO provider for partners: 2 user types, adaptive registration, cross-partner sessions, redirect-back.

Hoochie JSC Jun 2023 to Dec 2025

Product Owner · Web3, fintech (outsource)

- + **400ms cross-chain settlements.** Led the team building a non-custodial cross-chain wallet for a US client, with KYC/AML and fiat-crypto bridging via Solo and Bridge (Stripe).
- + **137% ROI in backtests (\$10K to \$23.7K in ~2 months).** Ran roadmap, backlog, and Scrum for an autonomous on-chain prediction-market fund powered by Score (Bittensor Subnet 44).
- + **Shipped aVault and aLink.** Permissionless USDC deposits with automated strategies, and a token-gated LLM terminal for mispricing alerts; ran the DKING to SIRE rebrand.
- + Specced a Telegram-integrated trading toolkit for the TON ecosystem: sniping, automated trading, MEV protection, and referrals.

Olmo Technology Apr 2022 to May 2023

Product Owner · social e-commerce, web and app

- + **12-person scrum team** (9 devs, 1 QC, 1 designer, 1 BA). Launched a livestream app in 6 months and an e-commerce platform (booking plus vouchers) in 4.
- + **30% increase in bookings.** Reworked the mobile booking flow and cut the bank-transfer payment task time inside a week.
- + Shipped livestream gifting and live-booking. As Junior PO: competitor research, personas, backlog and stories, delivering sprint items **20% faster**.

4/10 Fire Protection Trading Service Jul 2019 to Jan 2022

BA and Associate PM · ERP

- + Owned resource-management and quality-control ERP modules, focused on integration and operational efficiency.

AI-NATIVE BUILDING

PM intelligence system. A Claude agent system that runs the product function: transcripts auto-compile into a structured wiki, conflicts resolve against a truth hierarchy, and every spec is graded and health-checked before engineering. Built on the Karpathy LLM Knowledge Base pattern with agent skills and subagents.

Petmood. AI pet-health triage for Vietnam: a photo plus symptoms returns a triage level and the nearest vet. Flutter, Supabase, Vision + LLM. Beta in HCMC.

AnDigi. An agent-operated insurance app for Vietnam where LLM agents run the core workflow from quote to instant AI claims. Benchmarked on China's Ping An ecosystem. In progress.

EXPERT PM SKILLS

Discovery and problem framing: product discovery, problem and opportunity framing, hypothesis and assumption testing, scoping ambiguous direction into a defined problem

Requirements and specification: PRD, BRD, and SRS, use-case and user-story modeling, acceptance criteria, scenario and edge-case modeling, partial-failure and exception design

Spec quality and provenance: spec grading for clarity and completeness, source provenance and traceability, conflict resolution by truth hierarchy, health checks before handoff to engineering

Roadmapping and delivery: roadmapping, prioritization and tradeoff calls, backlog ownership, sprint planning, Scrum delivery, parallel-track planning from one spec source, analytics-informed decisions

Alignment and leadership: stakeholder and executive alignment, translating ad-hoc CTO direction into a buildable spec, cross-functional leadership across engineering, QA, design, and compliance

AI-native PM operations: orchestrating an agent system that drafts and grades specs, designing agent skills and subagents for PM work, keeping human sign-off on every diff

Tools: Jira, Notion, Figma, GitHub, GA4
