

Tien Nguyen

AI-NATIVE PRODUCT MANAGER · PRODUCT OWNER · EX-FULL-STACK ENGINEER

tiennguyentthao@gmail.com / +84 963 351 586 / linkedin.com/in/tiennguyenthithao / tiennguyentt.github.io / Ho Chi Minh City

I lead agentic AI workflows from ambiguous discovery through governed production: creating source-traced specifications, evaluating outputs against ground truth, and embedding human approval into critical changes. I build AI products that ship, gain adoption, and hold up under real operational constraints. AI-native PM and ex-full-stack engineer, with seven years across regulated insurance, payments, fintech, Web3, e-commerce, and ERP.

PCI EMERGENCY GATEWAY MIGRATION	137% · +30% BACKTEST RETURN · BOOKINGS LIFT	5 AI SYSTEMS BUILT	7 yrs DISCOVERY TO PRODUCTION
------------------------------------	---	-----------------------	----------------------------------

EXPERIENCE

Colonial Surety

2026 – Present

- Product Management Engineer · B2B fintech, insurance, payments
- Own the controls on the agent-operated PM workflow. Transcripts graded for traceability, specs linked to source, no diff ships without my sign-off. Defined the integration points and team rollout inside a regulated US insurer.
 - Migrated payments under an emergency PCI deadline. Ran the Transax to CardPointe cutover across 3 production platforms after the primary gateway shut down, scoping impact and verifying each platform before go-live.
 - Designed seven insurance products in one flow. Modeled the bundling logic: knockout rules, unified claims, an edit-policy matrix, and partial-failure cases.
 - Scoped a B2B single sign-on provider. Turned ambiguous CTO direction into a structured BRD: two user types, adaptive registration, and cross-partner sessions.

Hoookie JSC

2023 – 2025

- Product Owner · Web3, fintech · forward-deployed client services
- Defined requirements for Keeta, a US payments network targeting 400 ms. Structured use cases, data flows, and acceptance criteria for a high-throughput DAG-ledger settlement design.
 - Built Sire.bot, 137% cumulative return in a two-month backtest. Defined model inputs, outputs, and the evaluation rubric, then scored predictions against ground truth before release.
 - Ran forward-deployed discovery for US and international clients. Worked from a Vietnam base, turning vague or conflicting direction into BRDs, SRS, and acceptance criteria, then checked each build against them before handoff.

Olmo Technology

2022 – 2023

- Product Owner · social e-commerce, web and app
- Ran onsite customer discovery. Met sellers in person with the sales team, shaped personas and backlog from the field, and pitched alongside the CEO to investors in Lisbon.
 - Lifted bookings 30%. Reworked the mobile booking flow and cut bank-transfer time, running a 12-person scrum core that shipped a livestream app in 6 months and a commerce platform in 4 months.
 - Shipped livestream gifting and live-booking. Owned a social-commerce app end to end: livestream with in-stream chat, marketplace, and community feed.

4/10 Fire Protection Trading Service

2019 – 2022

- Front-end Developer, then BA and Associate PM · ERP
- Built ERP modules from code to rollout. Started in front-end development, then owned the resource-management and quality-control modules across requirements, integration, and rollout.

AI-NATIVE BUILDING

selected AI products

- Built Knowledge Engine, a public demo of how agent teams run a real product-team workflow: it compiles transcripts into a source-traced knowledge base with context engineering, conflict resolution, spec grading, and human sign-off gates. Multi-model across Claude and Codex. [↗ Try it](#)
- Built Recon, an autonomous research and prediction pipeline: Claude Code agents produce daily reports and signal predictions, and a scoring engine tracks accuracy against ground truth. [↗ Try it](#)
- Built Sport Quant, a governed prediction-market terminal: statistical scoring, fractional Kelly sizing, and a deterministic risk gate that owns the bet decision while the model only explains the edge. [↗ Try it](#)
- Advising a Vietnam fashion-retail SME, forward-deployed on the ground with the business team: 100+ staff at headquarters, 25+ stores. Led discovery and designed a function-by-function AI deployment, then built and validated a first-wave marketing MVP (a social chatbot and workflow automation). Mapped a full rollout from pilot to adoption through 2027.
- Also building Petmood, an AI-vision and LLM pet-triage app (Flutter, Supabase, beta in HCMC), and AnDigi, an agent-operated insurance app from quote to AI-assisted claims (in design).

SKILLS

product management & ownership

Discovery	customer discovery, onsite workshops, scope and success criteria, stakeholder mapping, competitor and domain research
Deployment & delivery	pilot design, integration plans, production rollout, adoption tracking, risk and blocker removal, Scrum across engineering, QA, and design
Requirements	BRD / SRS / PRD, use-case and user-story modeling, acceptance criteria, edge-case and failure-path design
AI systems & controls	context engineering, evaluation criteria and thresholds, ground-truth checks, source tracing, human sign-off gates, observability
AI-native ops	agent workflows and subagents, MCP, APIs and data flows, model selection
Tools	Jira, Notion, Figma, GitHub, GA4, SQL, Claude, Codex, Cursor

EDUCATION

& credentials

Anthropic: Claude Code 101, AI Fluency, Agent Skills, Subagents	2026
Product School: Launches, Roadmap, Prioritization, Strategy, Discovery, AI Product Certification	2025
CoderSchool: Full Stack Software Developer	2019
HCMC University of Education: BA in English	2014
